Remark: 1. Max working temperature is only for reference as it is depended on dimension & shape

2, Customers are recommended to consult us involving temperature near to max working temperature.

3, When $B/\mu\text{H}=1$, the magnet is operated at mentioned max. working temperature, the irreversible losses less than 5% is guaranteed

Sintered Rare Earth Magnets NdFeB

N35

Material data according to DIN IEC 60404-8-1

Material data according to DIN IEC 60404-8-1

Grade	Remanence		Coercivity		Intrinsic coercivity	Energy Product		Temperature coefficient				Max. operating temp. C°	
	Br		Hcb		Hcj	BH(max)		20-100C°		20-150C°			
	mT		kA/m		kA/m (min)	kJ/m3		%/C°					
	min	typ	min	typ	20C°	min	typ	Tc(Br) typ	Tc(Hcj) typ	Tc(Br) typ	Tc(Hcj) typ	100	
N33M	1140	1170	848	887	1114	239	263	-0.12	-0.72				

Max Working temperature is only for reference as it is depended on the dimensions and shape.

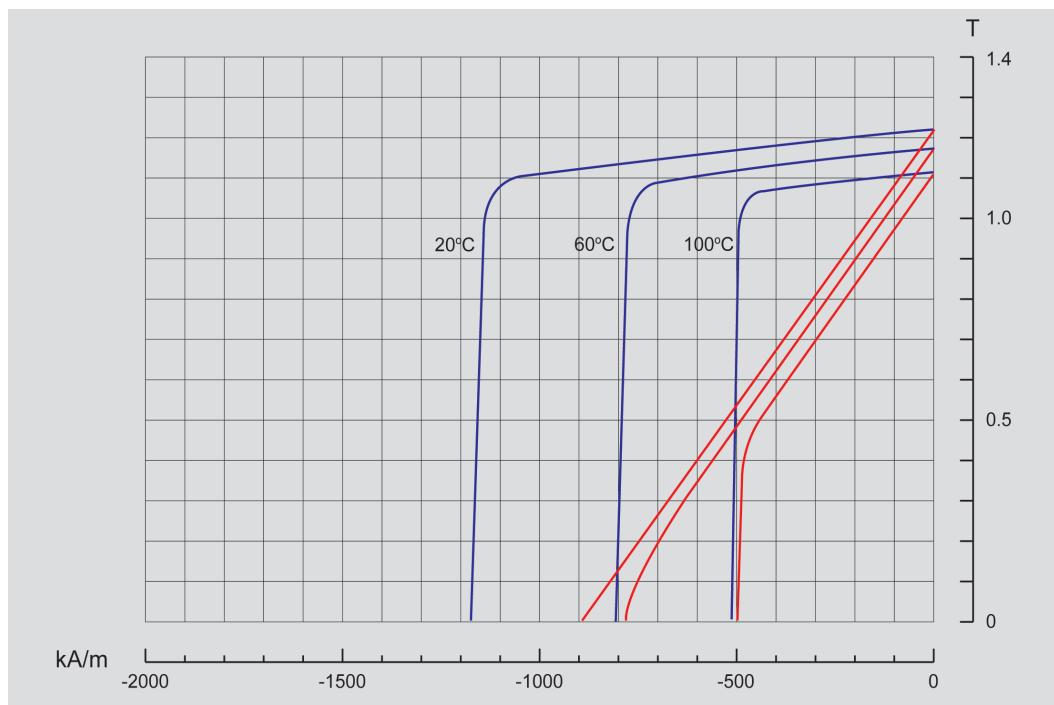

Mechanical properties		
Density (g/cm³)	7.4~7.6	Bending strength (MPa)
Vickers Hardness (Hv)	500~700	Compression strength (MPa)
Young's Modulus (KN/mm²)	140~170	Thermal Conductivity (W / m·K)
Curie Temperature C°	310~360	Electrical Resistance ($10^{-6} \Omega\text{m}$)
Spec. heat capacity (J/kg · K)	350~550	

The values shall be regarded as typical values.

Standard Coatings	Type	Typical layer thickness	Surface color	Remarks
Passivation		0.1-0.3 µm	Silver grey	Temporary Protection
Nickel coating	Ni+Cu+Ni	10-20 µm	Silver semi bright	Superior resistance to humid atmosphere
Zinc coating	Blue Zn	8-20 µm	Blue white shining	Good resistance to salt spray
Tin coating	Ni+Cu+Sn	15-20 µm	Silver semi bright	Superior resistance to humid atmosphere
Copper coating	Ni+Cu	10-20 µm	Gold shining	Temporary treatment
Epoxy	Ni+Cu Epoxy	15-25 µm	Black	Excellent climatic and salt spray resistance
Chemical Coating	Ni	10-20 µm	Silver semi bright	Excellent resistance to humid atmosphere

Standard Coatings	Type	Typical layer thickness	Surface color	Remarks
Passivation		0.1-0.3 µm	Silver grey	Temporary Protection
Nickel coating	Ni+Cu+Ni	10-20 µm	Silver semi bright	Superior resistance to humid atmosphere
Zinc coating	Blue Zn	8-20 µm	Blue white shining	Good resistance to salt spray
Tin coating	Ni+Cu+Sn	15-20 µm	Silver semi bright	Superior resistance to humid atmosphere
Copper coating	Ni+Cu	10-20 µm	Gold shining	Temporary treatment
Epoxy	Ni+Cu Epoxy	15-25 µm	Black	Excellent climatic and salt spray resistance
Chemical Coating	Ni	10-20 µm	Silver semi bright	Excellent resistance to humid atmosphere

N33AH	1140	1170	860	900	2787	239	263	-0.105	-0.50	-0.110	-0.45		

Max Working temperature is only for reference as it is depended on the dimensions and shape.

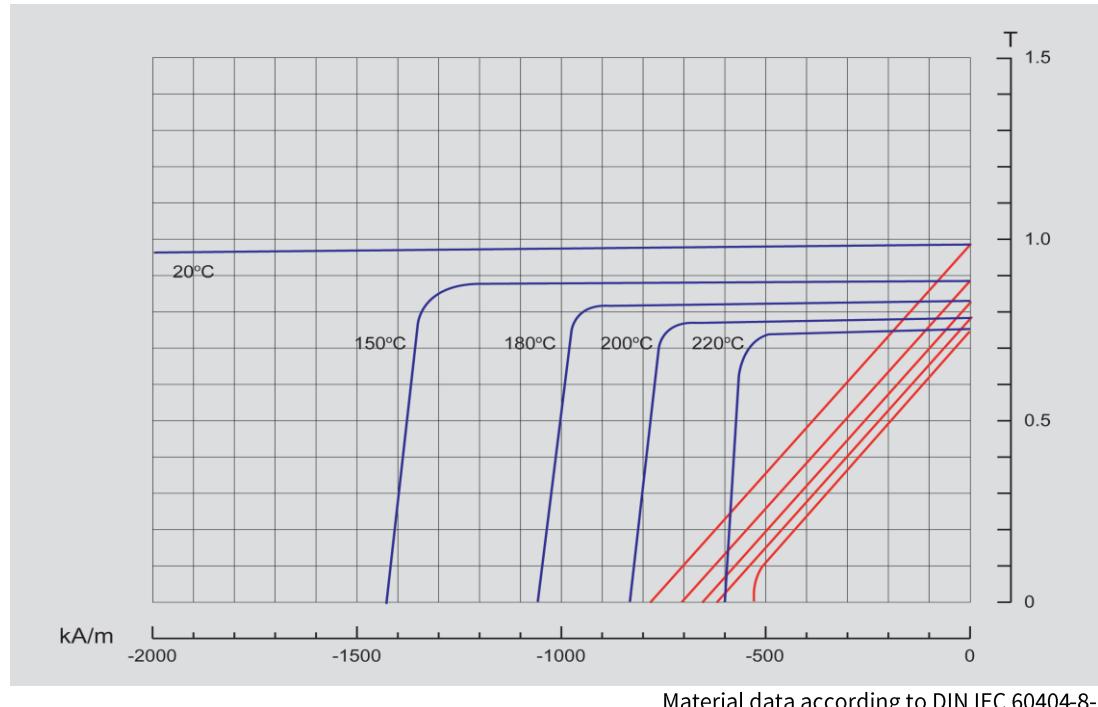

Mechanical properties				
Density (g/cm ³)		7.4~7.6		Bending strength (MPa)
Vickers Hardness (Hv)		500~700		Compression strength (MPa)
Young's Modulus (KN/mm ²)		140~170		Thermal Conductivity (W / m·K)
Curie Temperature C°		310~360		Electrical Resistance (10 ⁻⁶ Ωm)
Spec. heat capacity (J/kg·K)		350~550		

The values shall be regarded as typical values.

Standard Coatings	Type	Typical layer thickness	Surface color	Remarks
Passivation		0.1-0.3 μm	Silver grey	Temporary Protection
Nickel coating	Ni+Cu+Ni	10-20 μm	Silver semi bright	Superior resistance to humid atmosphere
Zinc coating	Blue Zn	8-20 μm	Blue white shining	Good resistance to salt spray
Tin coating	Ni+Cu+Sn	15-20 μm	Silver semi bright	Superior resistance to humid atmosphere
Copper coating	Ni+Cu	10-20 μm	Gold shining	Temporary treatment
Epoxy	Ni+Cu Epoxy	15-25 μm	Black	Excellent climatic and salt spray resistance
Chemical Coating	Ni	10-20 μm	Silver semi bright	Excellent resistance to humid atmosphere

Sintered Rare Earth Magnets NdFeB

N25BH
